SUBJECT: CHD - Alloy Wheel Clamp Protector Set

When the p/n 89299272 alloy wheel clamp protector set is installed on a CHD's clamps, the protectors are subject to damage if the clamps are moved to the fully closed position without a wheel on the machine.

To prevent damaging the protectors, all four protectors must be removed before fully closing the clamps.

It is critical that you communicate this to the end users when you are setting up and training on a CHD unit that is equipped with these optional accessories.

Note that all future Truckstops of America CHD-6330 purchases and setups will include these accessory protectors.
